Carbonic cam

User Research – 5Ws Analysis

WHAT – (The Product)

-A gamified mobile application and interactive carbon footprint tracker. It features a smart calculator, daily activity logging, and a visual "evolving planet" that changes based on the user's real-time eco-friendly actions.

WHY – (Problem & Solution) 🌍

- **The Problem:** Lack of environmental awareness in Egypt, coupled with "cold" or "boring" global calculators that don't resonate with the local user or offer rewards.
- **The Solution:** An interactive mobile application that calculates daily carbon footprints using **Gamification** (e.g., an evolving interactive planet) and provides actionable local recommendations.

WHO – Target Users

- **Primary Users:** Gen Z and Millennials (Aged 18–30) who are tech-savvy and seek engaging digital experiences.
- **Secondary Users:** Environmentally conscious families and eco-activists looking to track their daily impact.

WHEN & WHERE – Usage Behavior

When:-

•**Frequency:** Designed for **daily use** to build sustainable habits.
•**Triggers:** Users engage with the app when they perform daily activities like commuting, consuming energy, or shopping.
•**Key Insight:** 58.3% of surveyed users expect to use the app "several times a week."

Where:-

•**Geographic Context:** Specifically designed for the **Egyptian market**, filling a gap where no localized, fun tracking tool currently exists.
•**Platform:** A mobile-first experience (Android/iOS) to ensure it is always accessible for real-time daily tracking.
